PROJECTS

PIR sensor based security alarm system
Arduino UNO, PIR sensor and SIM800L GSM
Oct 2022 - Dec 2022
Developed a prototype that effectively detects intruder movement and instantly triggers an automated alert call to the user. This system guarantees real-time monitoring, rapid response, and significantly enhances overall security measures.

Wildlife Observation robot
Arduino UNO, ESP32 camera, GPS and Ultrasonic sensor
Dec 2023 - Apr 2024
Developed an advanced prototype utilizing the rocker-bogie model to capture and track the location of wildlife animals with a wireless camera. This state-of-the-art system operates autonomously, eliminating the need for human intervention and ensuring seamless, real-time wildlife monitoring continously.
